September 1st, 2026

- OpenAI announced they are integrating with Epic Electronic Health Record.
- 90% of people in the U.S. have a health record with Epic.
- Allow healthcare staff to bring patient information from the chart into ChatGPT.

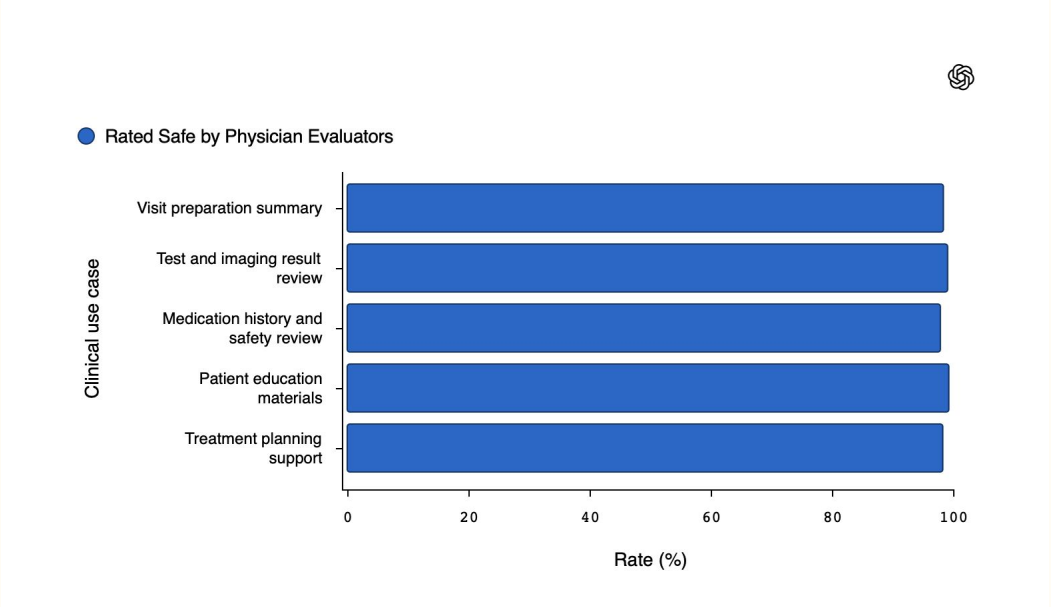

How Will This Change Healthcare?

- Physician Efficiency: “What has changed since this patient’s last visit?”
- Find Care Gaps: “What referrals or unresolved issues should I be aware of?”
- Applied Medical Research: Pull relevant clinical research from ClinicalTrials.gov, CMS Coverage, PubMed, RxNorm, and more.

Model Evaluation

- Physicians from 60 countries, 49 languages, and 26 medical specialities reviewed more than 700,000 responses.
- Across 27 clinical use cases, 99.1% of model responses were deemed safe by physicians.

Supported Integrations

- EHR context in ChatGPT: Bring over authorized patient information from the EHR to ChatGPT.
- ChatGPT in the EHR: Integrate ChatGPT into the EHR directly, supporting AI-assisted workflows.

> *"As a pilot partner, we're exploring how the new EHR integration with ChatGPT for Healthcare can help clinical teams understand what has changed and what matters most across a complex patient record. By bringing relevant information together more quickly and comprehensively, the technology has the potential to reduce time spent synthesizing data and give clinicians more time with patients. We're also engaging frontline teams to validate these capabilities in practice and help shape where they can add the most value."*
>
> *—Suresh Gunasekaran, President and CEO, UCSF Health*

Current Scope

- "ChatGPT for Healthcare" - available for both healthcare organizations and individual clinicians.
- Pilot Partners: AdventHealth, Baylor Scott & White, Boston Children's, Cedars Sinai, HCA, MSK, and UCSF.

Thank you!
